

Update: Urban Lakes PFCs Study
January 29, 2008

The Minnesota Pollution Control Agency has completed analysis of additional data from a study of PFCs in fish in Twin Cities-area fishing lakes. The MPCA began the survey in April 2007 after finding relatively high levels of PFOS in Lake Calhoun fish in Minneapolis last spring. The latest findings represent another 381 fish taken from 20 lakes and two new river reaches. (The first results were released in August 2007.)

The findings show a mix of results, from elevated levels of PFOS to no detection. However fish from several lakes had levels high enough to possibly be of concern. These lakes include Lake Johanna (Arden Hills), Cedar (Minneapolis), Harriet, Hiawatha, Jane, Keller, Powers, Red Rock and Tanners. For example, fish from Lake Johanna have levels similar to those previously found in fish from Lake Calhoun and Lake Elmo.

Fish from a number of lakes or rivers in the survey show little or no trace of PFOS, including Cedar (Scott County), Centerville, Colby, Green Mountain, Hydes, Independence, Nokomis, Peltier, Upper Prior, Sarah, Silver, and the Mississippi River at Brainerd.

The MPCA urban lakes study will be complete after results from Lake Minnetonka and Lake Josephine come in later this winter. Certified analysis can take several months due to the number of parameters included and the fact that only a few labs in North America can analyze PFCs in fish tissues.

Fish were collected over the summer by PCA and DNR crews and analyzed for 13 different PFC compounds. Lakes were selected based on higher fishing pressure and prevalence of species such as bluegill and bass, which have shown relatively higher concentrations of PFOS. Of the 13 compounds, only PFOS has been found to accumulate in fish tissue.

The Minnesota Department of Health is evaluating the MPCA fish data as part of the annual update of the Minnesota Fish Consumption Advisory. Each year MDH incorporates new data on many contaminants, including mercury and PCBs, into the update to provide Minnesotans with advice about how to benefit from the good nutrition available from fish with the least amount of contaminants.

“The fish consumption advisory is based on long-term, lifetime exposure and any changes to the advice, if indicated, would be similar to past advice for PFC-impacted waters,” said MDH scientist Pat McCann. The current Minnesota Fish Consumption Advisory, including the general statewide advice, is available at <http://www.health.state.mn.us/divs/eh/fish/index.html>.

The results of the MPCA's urban lakes study provide some important clues about the presence of PFCs in parts of the Twin Cities that aren't near known sources of PFC wastes or manufacture. The widely varying fish-tissue results suggest that atmospheric

deposition of PFCs likely is not a significant contributor to the elevated concentrations of PFCs in some metro-area lakes. Results of shallow groundwater sampling have shown similar variability, and atmospheric deposition would be expected to produce much more uniform concentrations of PFCs in shallow groundwater, lakes, and fish.

The likelier explanation is that varying PFOS concentrations are due to runoff in stormwater associated with different land uses around lakes. The chemicals are in a wide variety of commercial, industrial, and consumer products, e.g., firefighting foam, lubricants, and water- and grease-resistant coatings on paper and fabric, and could be entering stormwater from those sources.

Complete data for the study results thus far follow below. For more information on the findings contact Paul Hoff, 651-296-7799; Laura Solem, 218-529-6254; or Ralph Pribble, 651-296-7792. For information on the MDH's fish consumption advisory program contact Pat McCann, 651-201-4915.

	Average PFOS Concentration [ng/g; ppb]

For further information please contact Paul Hoff 651-296-7799 or Laura Solem 218-529-6254.

Samples were analyzed for the 13 different perfluorochemicals listed.

			CAS #
PFBA	C-4	perfluorobutanoic acid	375-22-4
PFBS	C-4	perfluorobutane sulfonate	375-73-5
PPPeA	C-5	perfluoropentanoic acid	2706-90-3
PFHxA	C-6	perfluorohexanoic acid	307-24-4
PFHxS	C-6	perfluorohexane sulfonate	355-46-4
PFHpA	C-7	perfluoroheptanoic acid	375-85-9
PFOA	C-8	perfluorooctanoic acid	335-67-1
PFOS	C-8	perfluorooctane sulfonate	1763-23-1
PFOSA	C-8	perfluorooctane sulfonamide	754-91-6
PFNA	C-9	perfluorononanoic acid	375-95-1
PFDA	C-10	perfluorodecanoic acid	335-76-2
PFUnA	C-11	perfluoroundecanoic acid	
PFDoA	C-12	perfluorododecanoic acid	307-55-1
